

After Care

To get the very best out of your artificial grass, there are a few simple steps that we suggest to keep it in tip-top condition.

KEEP IT CLEAN.

After a while, soil, twigs and other unwanted stuff might find their way onto your grass. This won't affect it at all, but if left over a long time it could encourage weeds to grow. Simply go over your grass with a stiff brush or a plastic rake (but not a metal one), or a garden blower/vac.

A GOOD BRUSH UP.

From time to time, give your grass a good going over with a stiff brush or plastic rake. This will perk up the pile of your grass, especially in the areas that aren't used so much. It's a bit like giving your hair a comb and will smarten up the look of your grass.

TAKING CARE OF BUSINESS.

We're sure you already know- artificial grass is great for pets. Just let them do their business as usual- it won't discolour or die like natural grass. However, now and again, just give your grass a bit of spruce up with our artificial grass cleaner (or similar products – patch test ALWAYS recommended.) This will freshen it up and reduce the build-up of odours.
